

One Key Fits All

Ultion makes life as easy for you as it makes life hard for the intruder. Ask your locksmith to make one key fit every lock in your home.

This can stop him

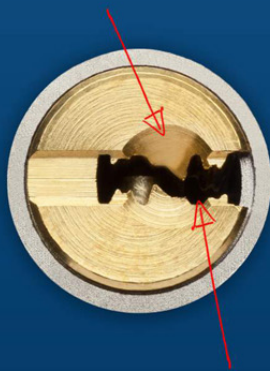

All there is in common with ULTION and normal locks...

...the shape

Easy key entry

There's no more awkward key fumbling, the concave recess in the lock face guides the key into location.

Self cleaning to stop jamming

Locks jam when keys carry dirt, debris and pocket fluff into them. Keys using magnets can even deposit metal fragments. Ultion's perfectly contoured key-hole wipes the key clean when it enters the lock.

Double Snap Resistance

If an attacker snaps Ultion, he is left only with a sacrificial end section. A second attack leaves him with the same again, leaving the lock secure.

Enters 'Lockdown Mode' when attack detected

If Ultion detects attack it activates a concealed attack lock directly into the central mechanism. So even if the attacker snap's the lock (twice) Ultion is still secure from the outside yet fully operational from inside, with a key! Ultion gives this protection even if the key is left in on the inside of the lock.

11 Pick Proof Pins

The unique 11 pin system makes Ultion almost impossible to pick. This is demonstrated with nearly 300,000 key combinations.

Drill Repellant

6 hardened steel anti-drill pins run through both sides of Ultion to thwart yet another attack method.

Bumps Bumping

If a 'bump key' is used to force entry, Ultion has pins designed specifically to repel the attacker.

TYPE OF LOCK	Typical 5 pin	Typical 6 pin	Typical 1 star	ULTION
COMBINATIONS	30,000	150,000	140,000	294,740
